

APN001

Application Note for Gira OS Connect

03/09/2010

Gira Has launched a new product in relation to its all ready successful Homeserver suite.

With the new software program OS Connect you can now use any input on the KNX system to launch and control programs on your apple computer.

This means you can start an iPhoto slideshow when you enter the room, Use a keypad to start a playlist in iTunes, skip to the next track in iTunes or tell the computer to go to sleep when you set the alarm.

And because it is a Homeserver program it can also be used with the Quad client and new Gira iPhone and iPad apps.

The program triggers standard scripts on the Apple computer so the possibilities are limitless.

Speak to Ivory Egg about how to incorporate this exciting feature into you next KNX Project.
