

The Sentido front uses a tight fitting to be mounted on the Sentido electronics.
Sometimes it is difficult to remove the front cover since it might be too tight.
To avoid using a screw driver or other tools and so damaging the Sentido cover and/or the wall finishing, the 'tube' tool has been developed.

Simply wrap it around one of the corners of the Sentido front and pull gently.
When the fitting releases, you can easily remove the Sentido front cover.
